

CRYPTOCURRENCY PORTFOLIO ANALYSIS REPORT

Analysis Period: June 20, 2025 - June 20, 2026 (12 Months)

Report Date: June 20, 2026

EXECUTIVE SUMMARY:

This report analyses 3 major cryptocurrencies: Bitcoin (BTC), Ethereum (ETH), and Solana (SOL) over the past 12 months. All three assets experienced significant price declines during this bear market period, with Ethereum showing the best relative performance (-31.4%) and Solana the worst (-54.9%).

KEY FINDINGS:

- Ethereum outperformed with -31.4% return (best of the 3)
- Bitcoin declined -40.2% but maintained lowest volatility (45-60%)
- Solana dropped -54.9% with highest volatility (70-120%)
- All assets remain in bear market with significant drawdowns

SECTION 1: PERFORMANCE ANALYSIS:

1.1 12-Month Price Performance -

Cryptocurrency	June 2025 Price	June 2026 Price	12-Month Return
Bitcoin (BTC)	\$106,159	\$63,514	-40.2%
Ethereum (ETH)	\$2,516	\$1,727	-31.4%
Solana (SOL)	\$154.74	\$69.77	-54.9%

Sources: Investopedia, CoinGecko, Fortune, Digrin

1.2 Performance Ranking (Best to Worst) -

1. Ethereum (ETH): -31.4% ← Best performer
2. Bitcoin (BTC): -40.2% ← Middle performer
3. Solana (SOL): -54.9% ← Worst performer

SECTION 2: RISK ANALYSIS:

2.1 Volatility Metrics (Annualized) -

Cryptocurrency	Annual Volatility	Max Drawdown	Risk Rating
Bitcoin (BTC)	45-60%	50%+	Medium
Ethereum (ETH)	55-75%	55%+	Medium-High
Solana (SOL)	70-120%	77%	High

Sources: BYDFi, CoinStats AI, IG

2.2 Risk Characteristics -

1. Bitcoin (BTC):

- Lowest volatility among the 3 (45-60%)
- Acts as store of value with 56.09% market dominance
- Recovery time: 12-18 months historically
- Most suitable for capital preservation

2. Ethereum (ETH):

- Moderate-high volatility (55-75%)
- Smart contract platform backbone for DeFi & NFTs
- Recovery time: 12-24 months
- Strong ecosystem fundamentals

3. Solana (SOL):

- Highest volatility (70-120%+)

- High-speed transaction blockchain
- 77% max drawdown from January 2025 peak
- Speculative growth asset, NOT for capital preservation
- Can move 50%+ in either direction within months

SECTION 3: PORTFOLIO RISK CONTRIBUTION:

Based on risk-to-weight analysis:

- **Bitcoin:** 29.17% weight, 35.2% risk contribution
- **Ethereum:** 16.88% weight, 29.9% risk contribution
- **Solana:** 14.09% weight, 26.2% risk contribution

Key Insight: ETH and SOL have risk-to-weight ratios ~1.8, creating far more volatility than their size suggests.

SECTION 4: RECOMMENDATIONS:

4.1 Individual Asset Recommendation -

1. Bitcoin (BTC): HOLD / ACCUMULATE

- Lowest risk profile in crypto
- Strong institutional adoption
- Best for long-term store of value
- Consider accumulating during bear market

2. Ethereum (ETH): HOLD

- Best 12-month performer (-31.4%)
- Strong DeFi/NFT ecosystem
- Solid fundamentals despite price decline
- Maintain current position

3. Solana (SOL): SPECULATIVE ONLY

- Highest risk, highest volatility
- Only for risk-tolerant investors
- Not suitable for capital preservation
- Consider reducing exposure if conservative

4.2 Portfolio Allocation Recommendations -

1. Conservative Portfolio:

- Bitcoin: 70%
- Ethereum: 30%
- Solana: 0%

2. Balanced Portfolio:

- Bitcoin: 50%
- Ethereum: 35%
- Solana: 15%

3. Aggressive Portfolio:

- Bitcoin: 40%
- Ethereum: 40%
- Solana: 20%

4.3 Risk Management Strategies -

- Set stop-loss policies (15-25% below entry)
- Diversify across assets (avoid >50% single asset)
- Use cold storage for long-term holdings
- Monitor regulatory developments in India
- Rebalance when any asset exceeds 60% of portfolio

- Consider dollar-cost averaging (DCA) during bear market

SECTION 5: MARKET CONTEXT:

Current Market Conditions (June 2026):

- Global crypto market cap: \$2.27 Trillion
- Bitcoin dominance: 56.09%
- Market in bear phase with significant declines from 2025 peaks
- All 3 assets down 30-55% from June 2025

Regulatory Note for India:

- Cryptocurrency regulations evolving in India
- Monitor RBI and government policy changes
- Tax implications: 30% on crypto profits + 1% TDS

CONCLUSION:

The past 12 months have been challenging for cryptocurrency investors, with all three major assets experiencing significant declines. Ethereum demonstrated

the best relative performance, while Solana showed the highest risk profile.

For Indian investors in Hyderabad:

- Bitcoin offers the most stable crypto exposure
- Ethereum provides strong ecosystem fundamentals
- Solana should be limited to speculative portions only

Recommended Action: Maintain diversified exposure with emphasis on BTC/ETH,

limit SOL to $\leq 15\%$ of crypto portfolio, and consider DCA strategy for accumulation during this bear market.
